

Celebrating 25 years, DacEasy by Sage 2010 continues a strong tradition of providing customers with the tools they need to run their businesses. This new version brings features and enhancements based on feedback from DacEasy customers just like you (and maybe even from you!)—making this version the most customer-focused release ever! See for yourself the great new benefits of DacEasy 2010...

Better Business Tracking and Reporting

Job Cost Module¹

Gain greater control and better manage jobs using the DacEasy 2010 Job Cost module. This module provides a full-featured job cost solution that includes job status, user-defined cost categories, phases and subphases, estimates, and billing types. And because this is an updated version of the DacEasy Job Cost module provided in previous releases, DacEasy customers can easily upgrade from their previous version of DacEasy.

Simplified Sales and Focus on Customer Relationships

Credit Card/Debit Card Processing²

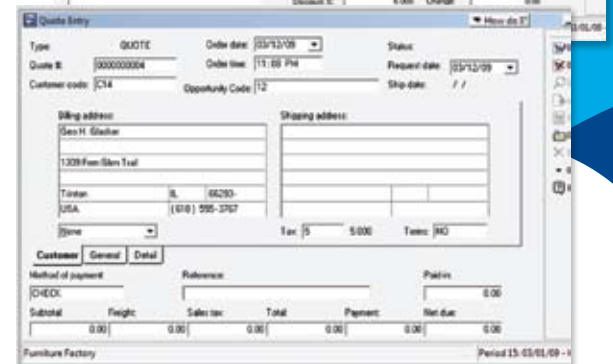

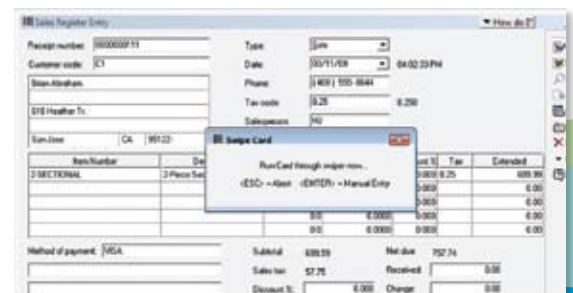

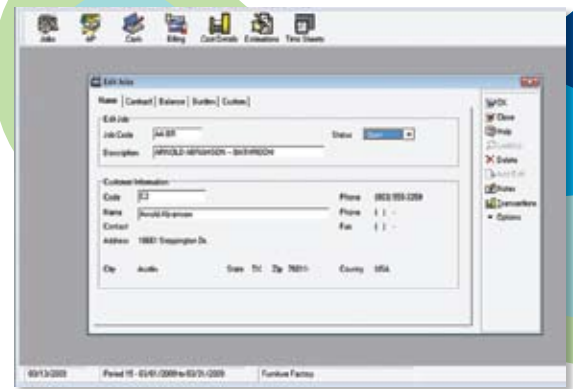

Make the sales process even more convenient for your customers with credit card and debit card processing. DacEasy 2010 integrates with Sage Payment Solutions, allowing you to process credit card and debit card payments from your customers easily.

Quote History

Gain greater control and better manage opportunities during the sales process using Quote History in DacEasy 2010. Quote History allows you to generate quotes easily based on a previous quote and to retain each version of the quote you supply to customers. Using Quote History, you can quickly recall information previously conveyed to customers and gain better insight into your sales opportunities.

Customer Purchase Lookup

Simplify the product reorder process and make servicing your customers even easier with the new Customer Purchase Lookup feature. DacEasy 2010 allows you to view your customers' past purchases quickly so you can service them intelligently and easily reorder products.

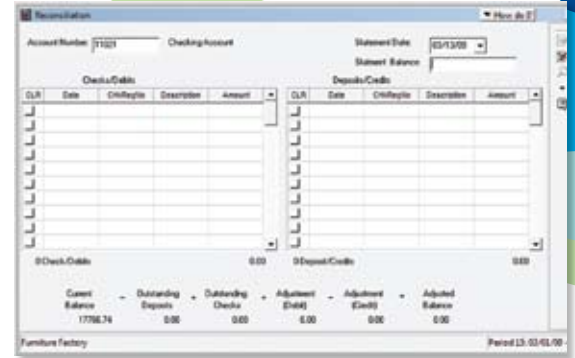

Agile Financial Management Tools

Cash Management

Better manage cash transactions and gain insight into the status of your bank accounts using the new Cash Module feature. The Cash Module feature provides a simple method to enter payments and deposits while providing a running balance for your bank accounts on a register.

Account Reconciliation

Simplify the bank account reconciliation process using new Account Reconciliation tools. DacEasy 2010 displays payments and deposits in separate lists, allowing you to quickly locate the transactions you need to clear as well as identify discrepancies between your account and bank statement. Additionally, using click to clear functionality makes reconciling your bank accounts quick and easy.

More Flexible and Reliable Business Processes

Enable/Disable User-Defined Earning Codes

Simplify bonus payouts, sales commission payments, and other nonregular payments to employees with the ability to enable and disable user-defined earnings codes. DacEasy 2010 allows you to create user-defined earnings codes and enable or disable them for individual payroll runs, making nonregular payments to employees easy.

Cancel Multiple Orders

Make cancelling unwanted orders even easier with the Cancel Multiple Orders feature. DacEasy 2010 allows you to quickly select each order and cancel them all in one process.

Assembly Component Management

Configure the component lists for your assemblies in the order that works best for your business. DacEasy 2010 includes new tools that allow you to enter components on your assemblies where you want to and lets you move components in the order that makes sense for your business, making assembly management even easier.
